

# DIN FLANGED BALL VALVES

**REDUCED BORE : DN 15 – 150**

**PN 16 - PN 40**

**SERIES 7000 (716D, 740D)**

The Jamesbury® polymeric-seated flanged ball valves feature a flexible-lip seat design that provides positive bi-directional shut-off for a variety of applications in industries ranging from chemical and petrochemical to refining, pulp and paper, and power.

Polymeric-seated flanged ball valves are available in sizes DN 15 – 150 in both full-bore and reduced-bore designs that fully conform to PED and DIN requirements.

A choice of body, trim, and seat materials is available to suit an extensive range of applications. As an option, valves can be prepared for special services, such as chlorine clean, double block and bleed, oxygen clean, vacuum, NACE MR 0103, or cavity filler.

## Fire-Tite® Valves

Standard body and trim materials for *Fire-Tite* valves are carbon steel with 316 stainless steel trim and all 316 stainless steel. Seat material options include Xtreme® (X) for applications involving chemicals, petrochemicals, acids, caustics, and steam.

## CE Marked

All valves larger than DN25 are CE marked and documented to meet the European Pressure Equipment Directive (PED) 97/23/EC. CE marked products also meet the requirements of BS 5351, including static grounding.

## FEATURES AND BENEFITS

- Xtreme seat provides longer life, industry leading expanded performance boundaries, and greater value.
- Polymeric flexible lip-seat design offers tight shut-off in either direction and extended cycle life with minimum maintenance.
- *Fire-Tite* version with non-metallic seats meets API 607, and ISO 10497 requirements.

- Superior control characteristics, coupled with tight shut-off capabilities, make these valves ideal for a variety of on-off and control applications.
- API 608 compliance to serve refineries and related chemical and petrochemical industries.
- NACE MR0103 compliance available.
- Meets 21 standard and 12 optional industry standards and specifications.
- Face to face dimensions according to ISO 5752.

## NEW FEATURES AND BENEFITS For DN 15 through DN150 Series 7000

- New patented stem seal system is live loaded and engineered to assure long sealing life on sizes up to DN50.
- ISO 5211 Bonnet for global conformity on sizes up to DN50.
- New stainless steel linkage for VPVL, V-Series and ADC-Series actuators has a guided coupling to align topworks during assembly and eliminate side load stress on stem seals for long life, clean environment and reduced maintenance.

## Single-Source Responsibility

- Valves, actuators and accessories may be purchased completely mounted from one source.

## SPECIFICATIONS

### Flow Data

The table at right provides flow coefficients for *Jamesbury* valves covered in this bulletin.  $K_v$  values represent the flow of water at 16°C through the valve in cubic meters per hour at a pressure drop of 1 kg/cm<sup>2</sup>. To convert  $K_v$  to  $C_v$ , divide by .8569.

Valve Size	
DN	$K_v$ Bore
15	8
20	16
25	38
40	107
50	140
80	300
100	470
150	650

### Valve Body Ratings

These are the maximum working pressure ratings of the valve body only. The seat ratings, shown on the next page, determine the practical pressure limitations according to actual service conditions. Test pressures are recommended pressures for hydrostatic test with ball half open.

Temp °C	Maximum Working Pressure, bar			
	PN16		PN40	
	Carbon steel*	316 Stainless steel*	Carbon steel*	316 Stainless steel*
-29 to 38	16	14.7	40	36.8
100	16	12.5	40	31.3
150	15.6	11.4	39.1	28.5
200	15.1	10.6	37.9	26.4
250	14.4	9.8	36	24.7
Test Pressure	24	23	60	56

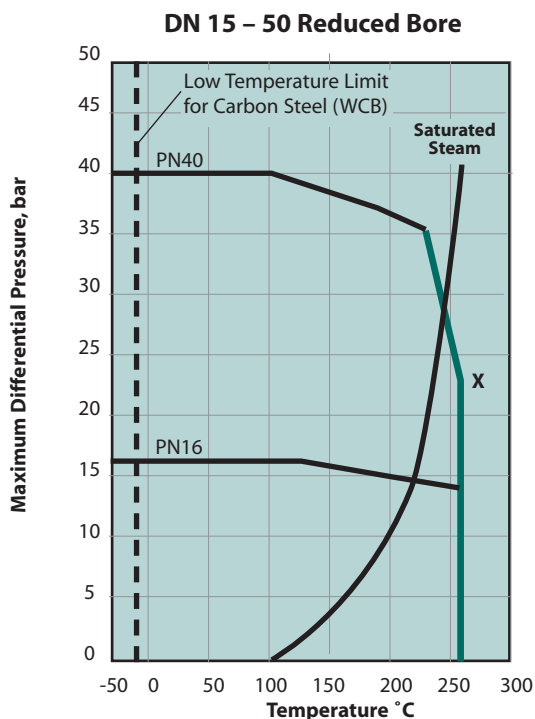

### Valve Seat Ratings

Seat ratings, indicated by solid lines in the charts on the next page, are based on differential pressure with the valve ball in the fully closed position and refer to seats only. The dotted lines indicate maximum working pressures for *WCB carbon steel* valve bodies. (Maximum working pressures of other body materials are shown in the tables above.) The combination of dotted and solid lines indicates the maximum valve rating at specific pressure and temperature conditions. Valves with *Xtreme* seats can be used in service to -51°C provided that the valve body material is suitable for such a temperature. Carbon steel valves are rated to -29°C.

On saturated steam service, stainless steel trim is recommended at all pressures and is required above 14 bar. See Bulletin B150-1. For more application information on seat materials, refer to Bulletin T140-1.

### Xtreme Performance and Value

*Xtreme* seats provide longer life, expanded performance boundaries, and the greatest possible value. *Xtreme* is a unique material that resulted from a technological breakthrough in our polymer research lab. The material is a fluoro-polymer-based blend proprietary to *Jamesbury* that provides superior quarter-turn performance.

**LEGEND:** X = Xtreme

**Jamesbury brand 'The Ultimate Process Automation Package'  
for VPVL Pneumatic Actuators, V-Series and ADC-Series Electric Actuators**

**DN 15 – 50 Reduced Port Series 7000**

**Automation Performance and Value**

Valves combined with *Jamesbury* actuators offer a total value and performance package. Available with pneumatic Valv-Powr® VPVL actuators, V-Series, ADC-Series, LCU-Series, and LCR-Series electric actuators and with

Stonel® Quartz®, Eclipse®, and Hawkeye® digital monitors or VCTs, the packages have a wide range of applications. Visit our website at: [www.metso.com/automation](http://www.metso.com/automation).

## ACCESSORIES

### Locking Devices

When safety measures are necessary, a reliable locking plate is available to allow the valve to be padlocked in either the open or closed position. Proper figure numbers are shown in the Accessory Table below.

DN 15 - 50 Series 7000

### Bonnet/Stem Extensions SE-096, 097 & 098

102 mm bonnet/stem extensions are available for applications that require insulated pipe, particularly useful for automated products, extension can also be used to prevent interference between actuators and companion pipelines and equipment. They are ideal as extension that require locking lever or locking oval handle capability. Stainless steel construction offers the option of using the extension to complement the carbon steel stem extension (SE-093, 094 & 095) offerings.

DN 15-50

### Round Handles

Series 7000 ball valves have optional round handles available. To order handles separately, specify the part number shown in the accessories table below.

### Oval handles with slide-lock

Optional oval handle saves space and may be padlocked to retain the valve in the open or closed position.

### Stem Extensions SE-093, 094 & 095

A standard 102 mm stem extension is offered for Series 7000 valves for improved accessibility, particularly when used in insulated pipelines. Stem extension kits can be ordered factory-mounted or shipped separately for field mounting.

### Stem Extensions SE-60, 61 & 62

A standard 102 mm stem extension is offered for Series 7000 valves for improved accessibility, particularly when used in insulated pipelines. Stem extension kits can be ordered factory-mounted or shipped separately for field mounting.

### VALVE TORQUE DATA

Use these torque charts as a guide for actuator selection. Additional requirements may be imposed by media characteristics, trim, and frequency of valve operation. For clean lubricating fluid service, required torque for *Xtreme* (X) and filled PTFE (M) seated valves only may be reduced 20% when the valve is equipped with corrosion resistant trim. For difficult services such as slurries and semi-solids, and for oxygen, increase values by 50%. If in doubt, err on the side of safety by using a larger actuator than would normally be selected.

Valves requiring increased stem seal performance should use E-Pak®. Refer to bulletin B115-4. *E-Pak* valves require an increase in operating torque.

Torque output values and actuator selection tables for the different types of *Jamesbury* brand actuators are contained in the bulletins listed below.

Manual Gear Actuators	A100-1
B-Series Piston Actuators	6B20
Quadra-Powr® X Spring Diaphragm Rotary Actuators	A110-4
<i>Valv-Powr</i> Series VPVL	A111-5
VPVL Stainless Steel	A111-4
V-Series Electric Actuators	A200-1
ADC-Electric Actuators	A201-1
LCU-Series Electric Actuators	A202-1
LCR-Series Electric Actuators	A203-1
